AUTOMATIC TEST EQUIPMENT

Terotest supply more ATE systems to Bombardier

TEROTEST has recently supplied a third ATE system to Bombardier Transportation. Two previous systems are used in their manufacturing facility which produce electronic signalling systems for railway companies around the World.

With safety being a critical factor in such products, the ATE systems are used to carry out comprehensive functional tests at various stages of the manufacturing process.

The latest system to be supplied is being used at the BOMBARDIER facility in Plymouth and has significantly reduced the test time for the trackside units it is testing.

Part of the initial order was to also supply a number of applications together with the systems.

The fixtures have been designed in such a way that the products can be tested as part of the production process and also after conformal coating. This allows units to be tested should they be returned as part of the on-going servicing program.

Terotest opens new office on the South Coast

Following a very successful period over the last two years TEROTEST has recently purchased new premises on the South Coast. The new office known as Endeavour House, located in Havant, will focus on supplying custom applications for the Wayne Kerr range of ATE products, and will shortly provide Geotest PXI applications as well as a CAD design service.

The office will also act as the base for the southern sales and applications team. The Head Office remains in Ashwell, Hertfordshire.

If you thought you couldn't test it.....talk to us!
