AUTOMATIC TEST EQUIPMENT

Terotest appointed UK distributor for Geotest

Terotest is delighted to announce that they have been chosen as a UK distributor for Geotest's impressive selection of PXI systems, modules and software.

Geotest are the only providers of an 'all in one' PXI test solution - GBATS, or Geotest Basic Automated Test System. GBATS is a modular platform, preconfigured to fit the exact requirements of the user, allowing it to be a complete test solution while remaining cost-effective. The GBATS platform is available in a series of customisable models with applications ranging from basic analog/digital functional testing to Military and Commercial avionics tests.

Terotest supply Geotest platforms, modules, instruments and software, as well as providing support and application integration services for these products.

Two systems supplied to Knorr Bremse

Due to increased production requirements and their ongoing high level of 'quality control' Knorr Bremse have purchased two large and fully configured new Wayne Kerr ATE systems to test their latest 'safety critical' rail products.

The requirement was very demanding as the customer required the machines to be delivered within a very short timescale. Terotest took the order in December 2007 and delivered two fully configured systems in January 2008.

If you thought you couldn't test it.....talk to us!
