

Scorpion

Turn Key, High Speed, Inline In-Circuit Test Solution for High Volume Production

- In-Circuit test system (MDA)
- **U**p to 1,024 test pins
- **S**ingle or double sided testing single fixture
- Complete fixture change in less than one minute
- Cycle time 4 seconds plus test time
- Maximum board size 350 mm x 400 mm
- Extended fault detection
- **B**uilt-in network analyzer
- SMEMA compliant conveyor
- Automatic program generation and debugging
- Optional functional testing
- Full software compatibility to Flying Scorpion
- ► Small Footprint: 1050 mm L x 1050 mm W x 1660 mm H

Technical Description

 ${f T}$ he Inline Scorpion is a fully automated in-circuit (MDA) test system for high volume production with the added advantage of a very fast change over time for different assemblies - less than one minute, including fixture change.

The Inline Scorpion is ideally suited for the modern flexible manufacturing line requiring a fast product change over. Upper and lower fixtures are a single unified fixture with coding for proper conveyor width and automatic call up of the test program.

Technical Notes

Test Handling System:

System footprint

Weight

Transport height

Conveyor width

Controller

Height of components

Board conveyor clearance

Maximum board size

Fixturing

Electrical requirements

Compressed air

1050 mm L x 1050 mm W x 1660 mm H

500 kg

900 mm ± 70 mm

50 mm to 430 mm

Siemens S7 PLC with control panel

60 mm max. top; 15 mm max. bottom

350 mm x 400 mm

Multi level; single or optional double sided

400 VAC (3 phase), 16 A

5 to 6 bar

Test Handling Options:

Independent signal interface for upper fixture for double sided testing

Automatic conveyor adjustment

Increased space for bottom side components

Extended SMEMA protocol support

Remote diagnostics

Guarding

Test System Specifications:

64 to 1,024 in increments of 64 Test pins

Two 4 quadrant DC Stimuli from 10 mV to 10 V and Stimulus

2.44 nA to 1 A; One 25 mV to 100 V @ 20 mA Relay matrix

4-wire measurements using any test point combination

Guarding at each test point. Up to 1 A with

programmable current limit

Voltage 100 V

1 A max. continuous; 0.5 A switched Current

Measurement 12-bit DC voltmeter. Range from 80 mV to 100 V,

resolution 19 µV; measurement programmable

from 2 µsec to 16 sec. in 2 µsec increments

Resistance 1 m Ω to 360 M Ω

Capacitance 10 pF to 10 F

10 µH to 10 H Inductance

Voltage 19 µV to 100 V

Test System Options:

BodeScan

 CScan Detects faults including: open leads on ICs including

BGAs; reverse electrolytic capacitors; connector pins and

decoupling capacitors

ChipScan Detects open leads on ICs including BGAs with heat sinks

Built-in network analyzer for detecting missing or wrong

small value components in complex RF networks

Functional test IEEE, VXI, LabView, MetLab, etc.
